Allowable Subject Matter

Claims 1-2, 4, and 6-18 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites, "a test and debug port, the test and debug port adapted for coupling to a communication bus, the test and debug port receiving signals from and sending signals to a host processor unit, wherein the control signals individually enable and disable each of the timing trace apparatus and the program counter and data trace apparatus based on a current state of the target processor". This feature, combined with additional claimed subject matter, overcomes the prior art of record.

Claim 7 recites, "sending the trace streams to the host processing unit over a communication bus, wherein the predetermined user and target processor input signals individually enable or disable the generation of each of the timing trace stream, the program counter trace stream, and the data trace stream based on a current state of the target processor". This feature, combined with additional claimed subject matter, overcomes the prior art of record.

Claim 12 recites, "a trigger unit responsive to user input signals and to central processing unit signals for generating control signals controlling the timing trace generation unit, the program counter trace generation unit, and the data trace generation unit, wherein the trigger unit is operable to individually enable and disable trace stream generation by each of the program counter trace stream generation unit, the data trace stream generation unit, and the timing trace stream generation unit in

Art Unit: 2863

response to a current state of operation of the central processing unit". This feature, combined with additional claimed subject matter, overcomes the prior art of record.

Claim 16 recites, "a pipeline flattener, the pipeline flattener aligning the program counter address with the completion of the instruction, the pipeline flattener flushing instructions in response to a halt execution signal in an unprotected pipeline, the pipeline flattener halting operation in a protected pipeline". This feature, combined with additional claimed subject matter, overcomes the prior art of record.

Claim 17 recites, "wherein the timing trace stream can be controllably enabled during the execution halt state". This feature, combined with additional claimed subject matter, overcomes the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
